

Mirror & Control iOS devices on PC

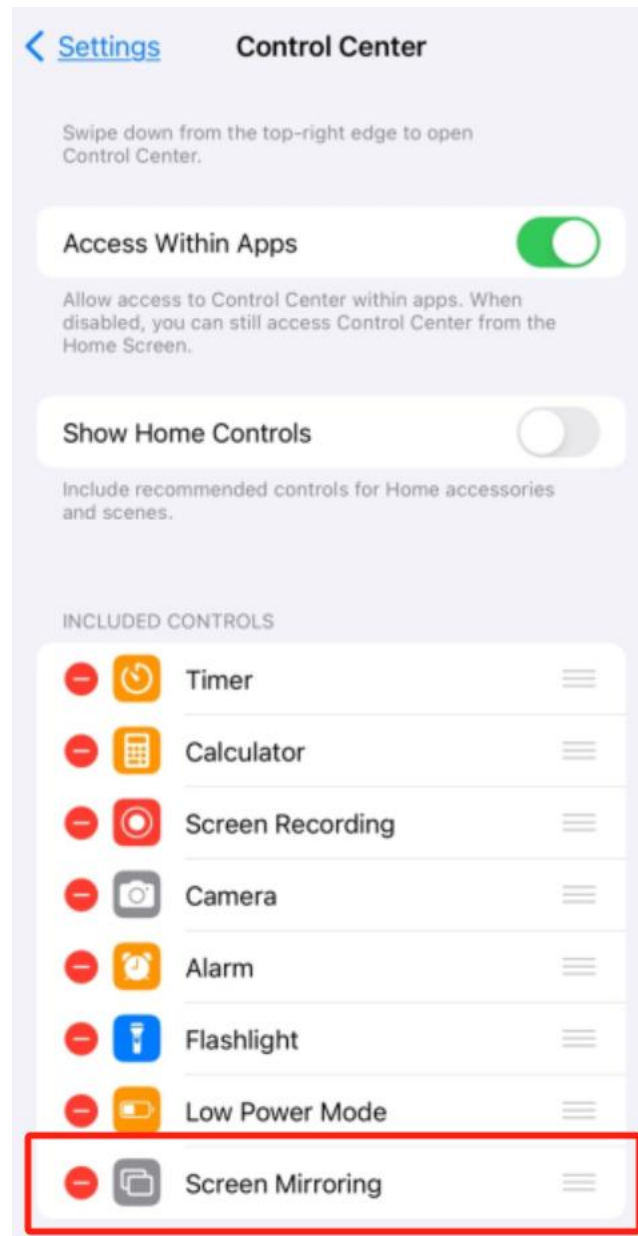

(Only supports Windows systems)

Thank you for using Tiger Mirrorsync. Our software requires only simple steps to mirror your device to your computer via WiFi or data cable. Below is a detailed tutorial.

Part 1: How to add screen mirroring to Control Center

Go to **Settings > Control Center > More Controls**, find **"Screen Mirroring"**, and click the + in front of it.

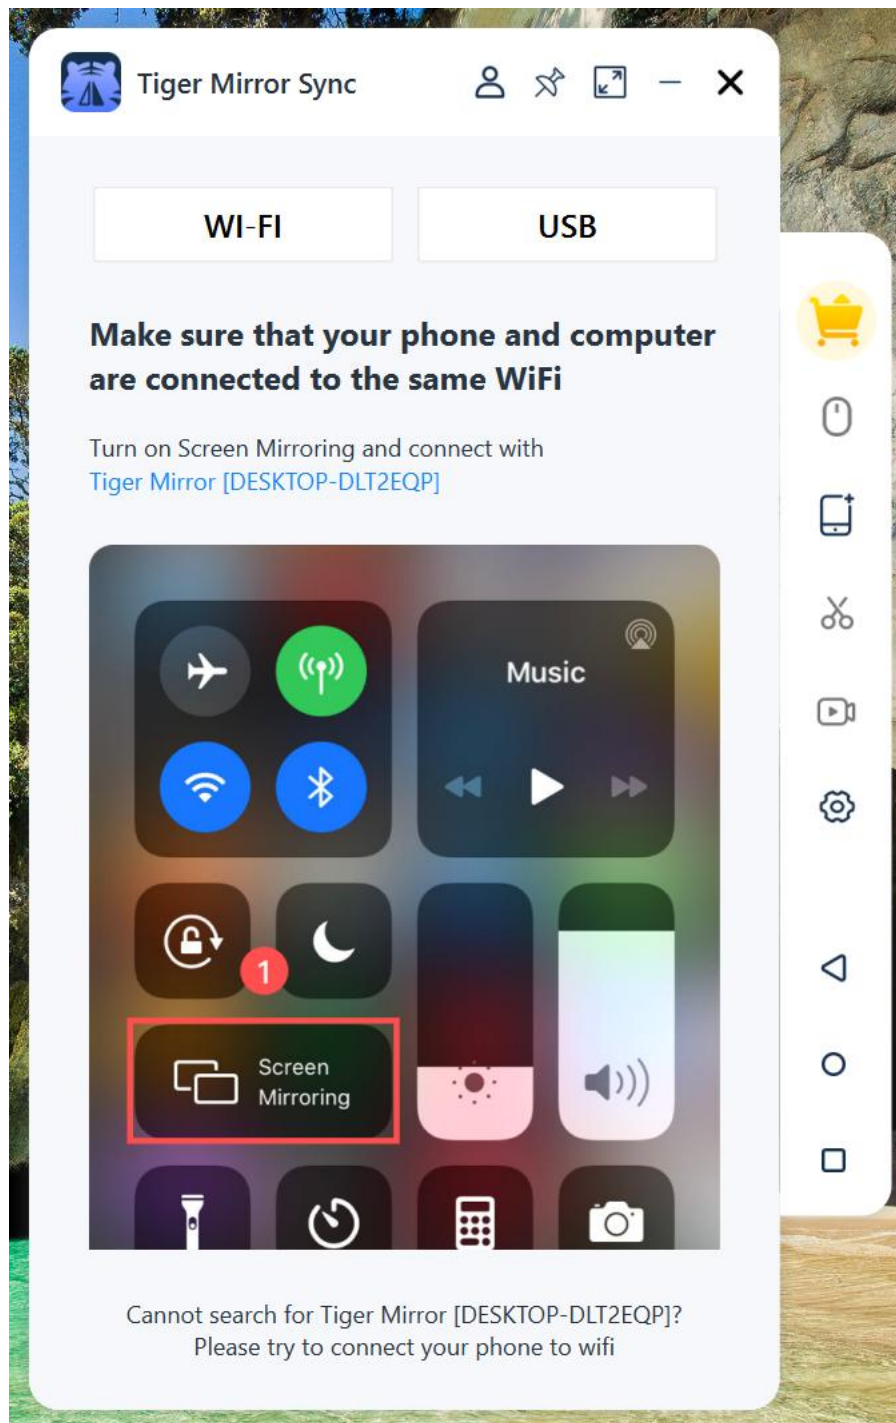

Part 2: How to Mirror iOS Devices to PC

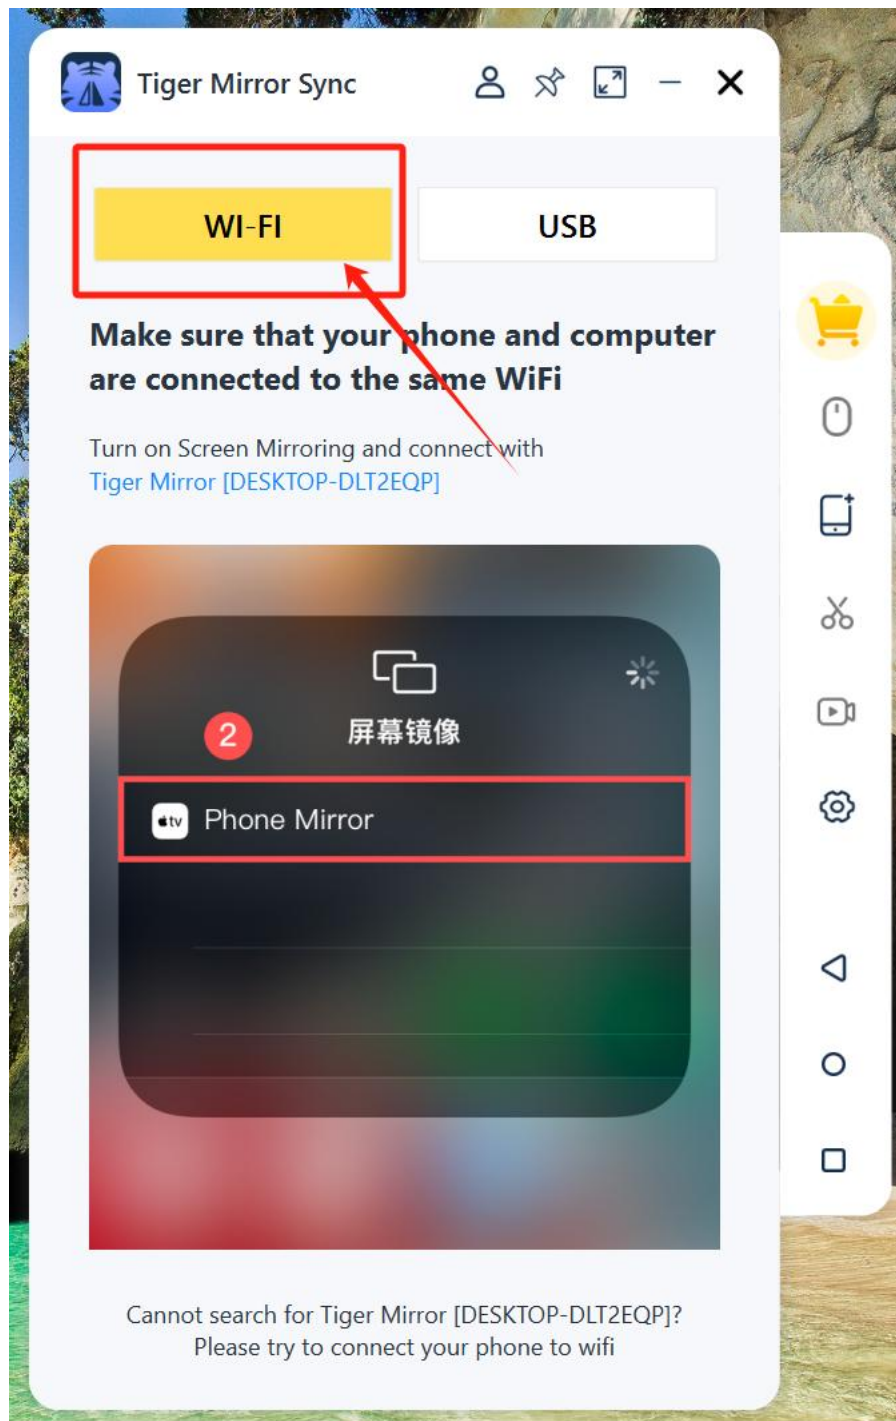

- Mode 1: Mirror iOS Devices to PC via Wi-Fi

Step 1: Launch Tiger Mirrorsync

Step 2: Tap Wi-Fi to use Tiger Mirrorsync over a Wi-Fi connection.

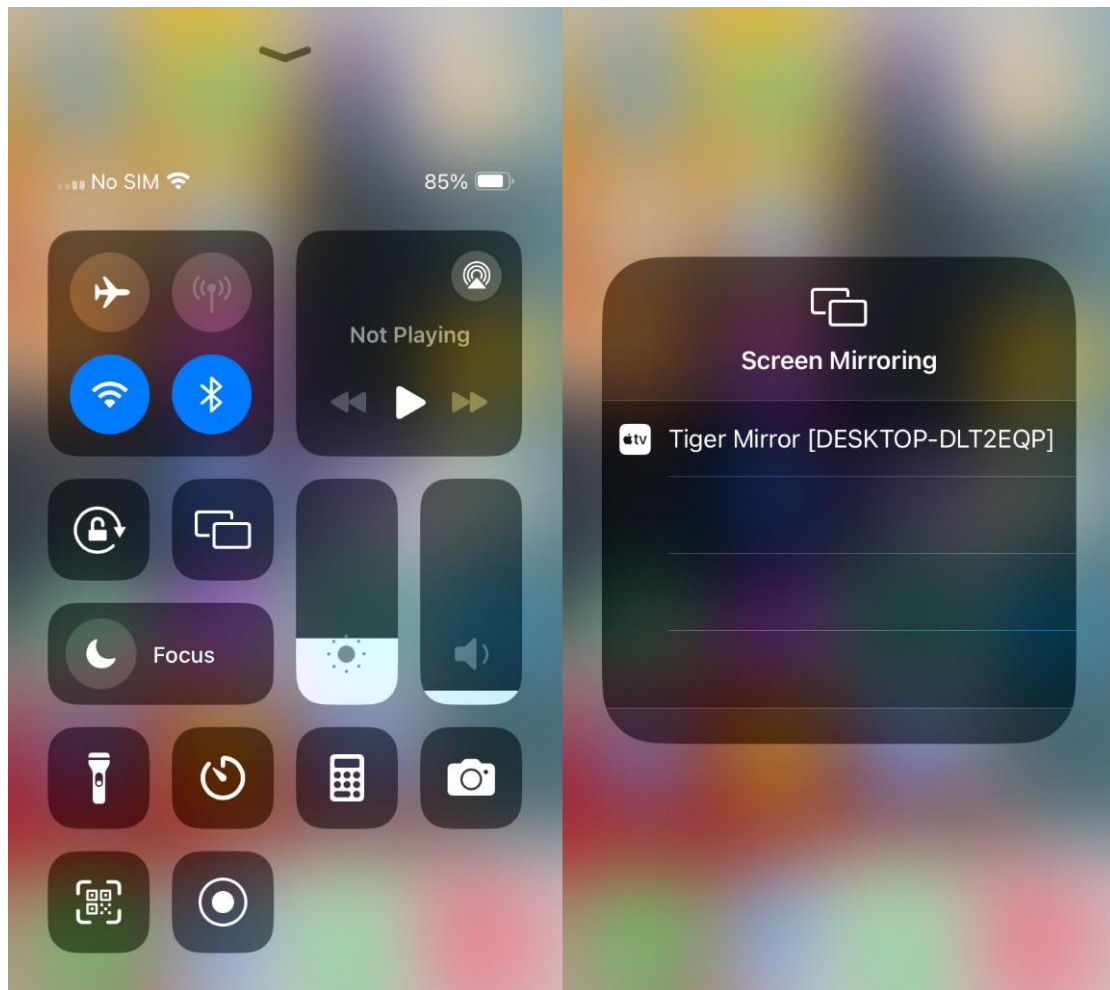

(Note: Please make your iOS device and computer in the same Wi-Fi network environment.)

Step 3: Start to mirror your iOS devices

Go to the **Control Center** > **Screen Mirroring**, select "**Tiger Mirrorsync**", and then start mirroring.

(How to open the Control Center: Pull down from the phone's home screen)

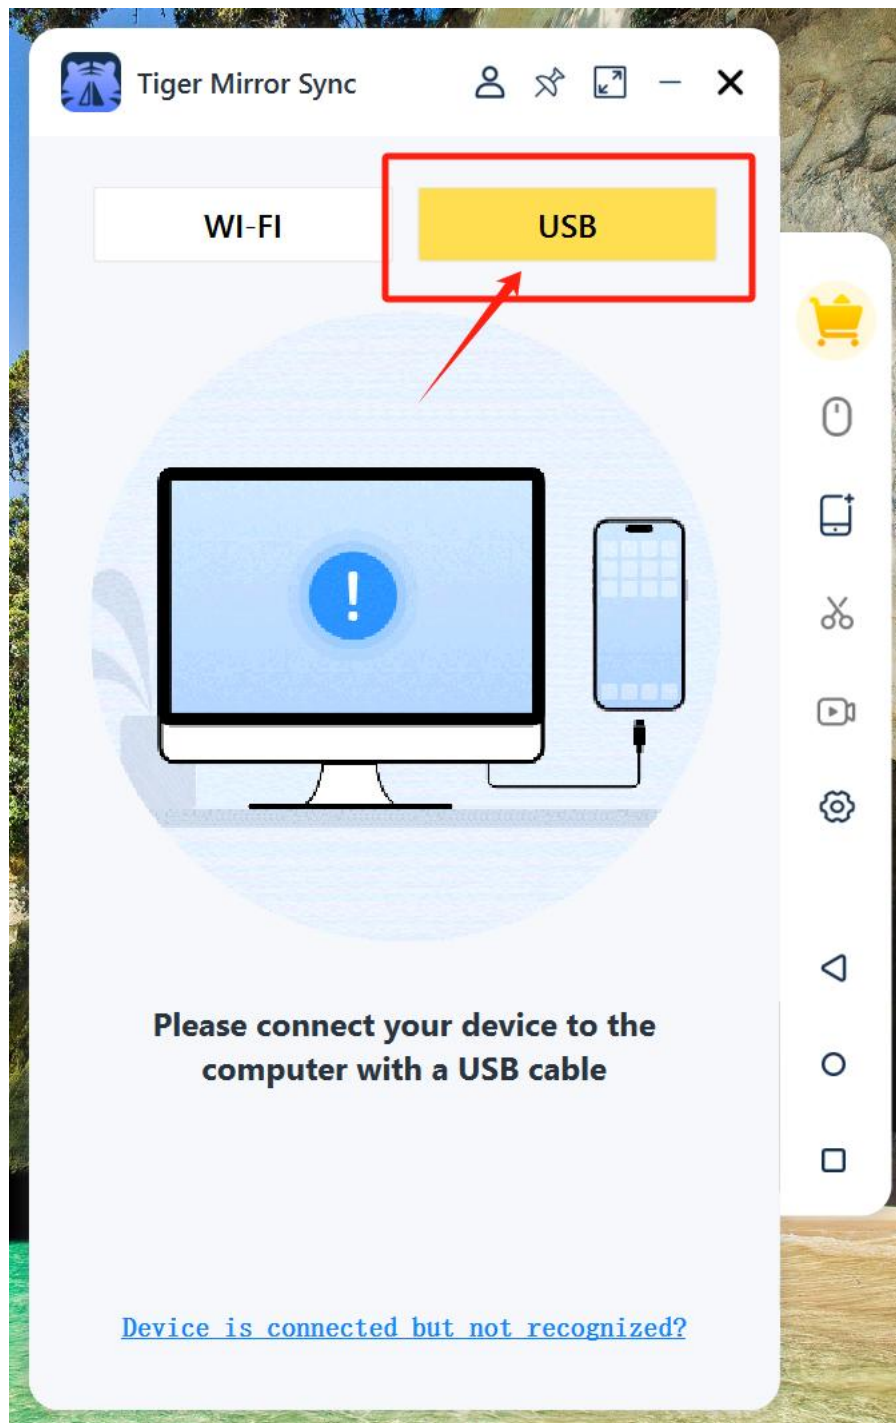

- Mode 2: Mirror iOS Devices to PC via USB

Step 1: Launch Tiger Mirrorsync

Start Tiger Mirrorsync and select "USB".

If the software displays a connection error, please replace the data cable, or disconnect and reconnect the interfaces at both ends.

Step 2: Choose your device

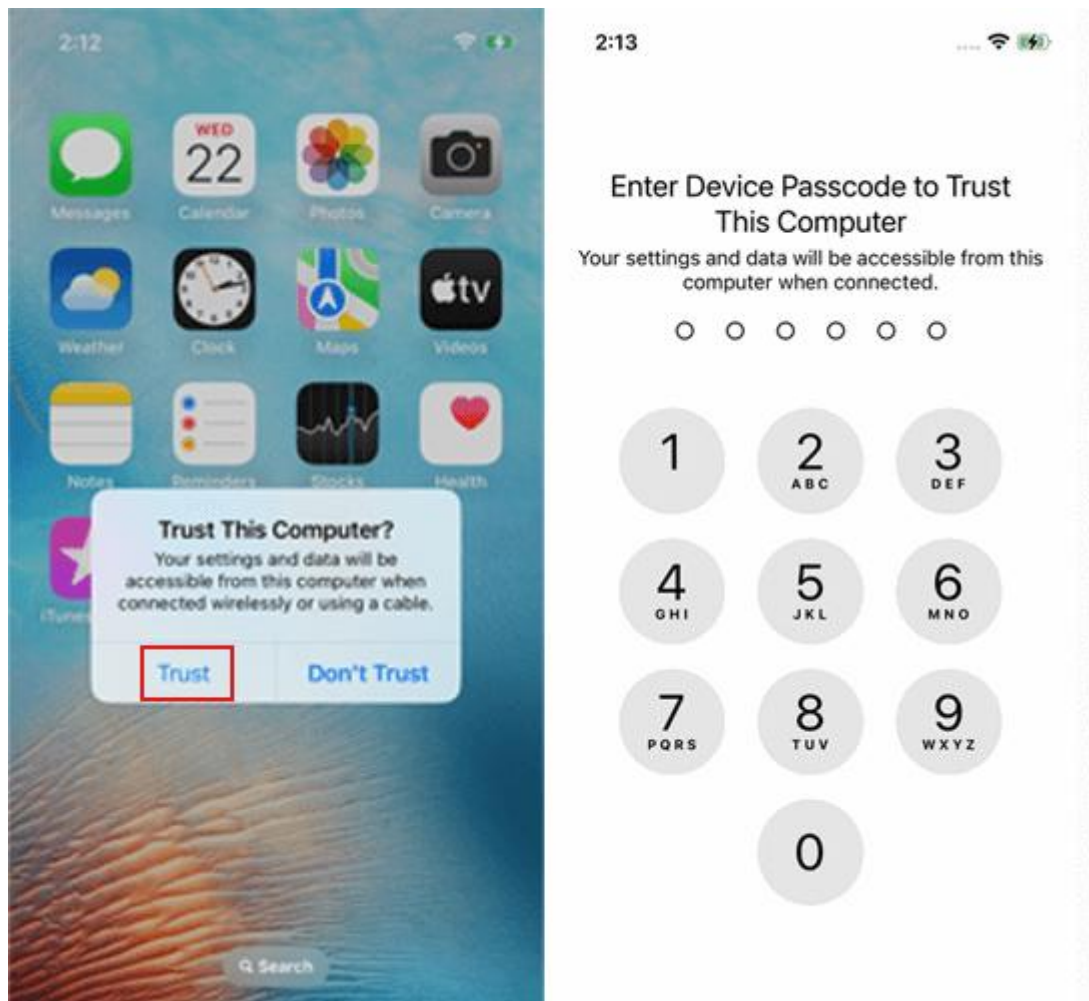

Choose a device

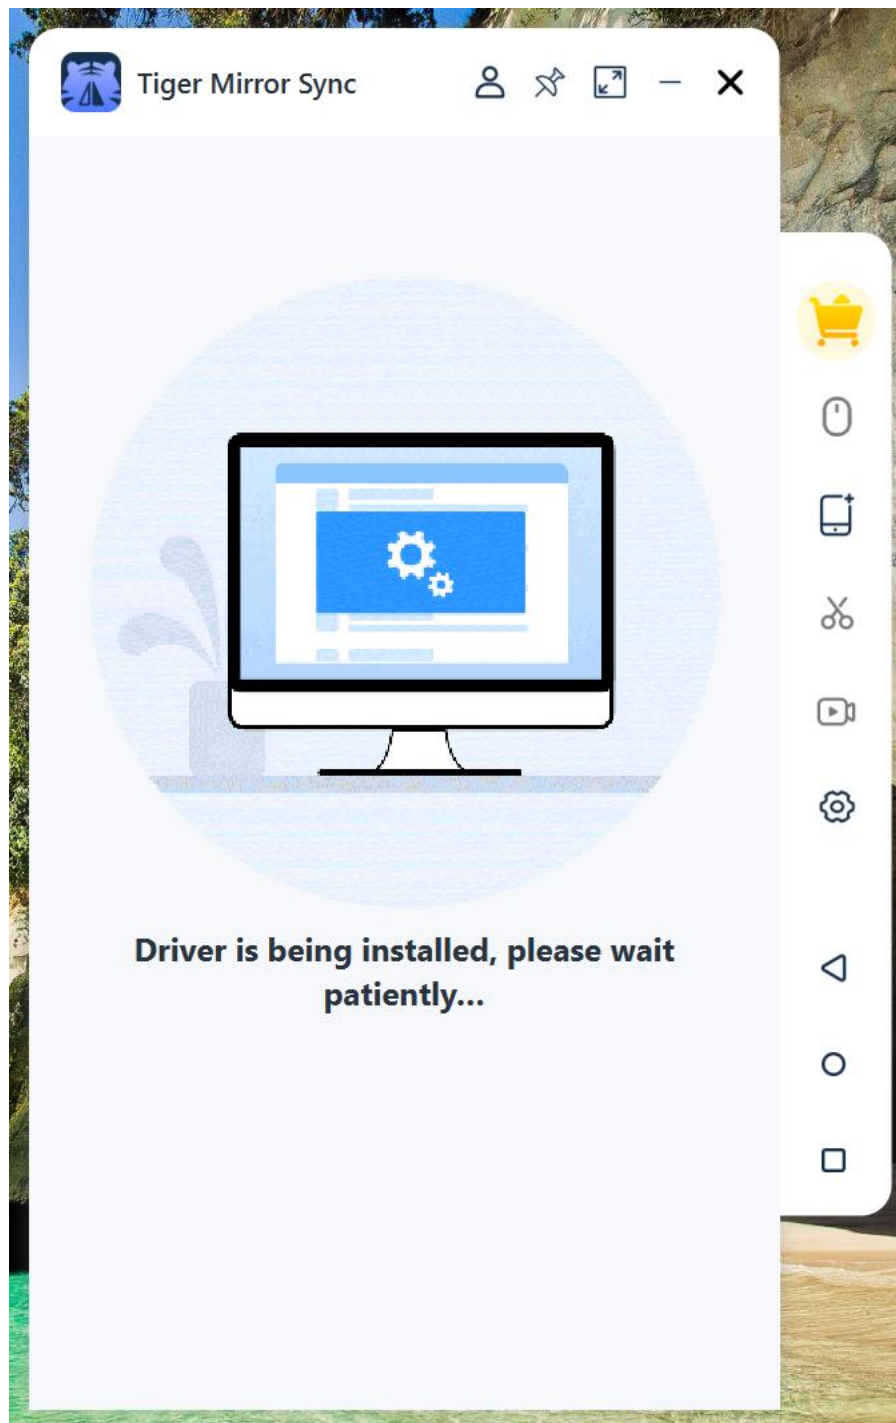

☒ iPhone

OK

Step 3: Trust your computer on your iPhone

When the iPhone asks you to "**Trust this computer**", click **Trust**. Then enter your screen password to complete the process. Now your iOS device is successfully mirrored to PC.

Part 3: How to control iOS Devices from PC

If you want to control your iPhone through your computer, you need to pair your iPhone and PC's Bluetooth after completing the above steps.

Step 1: Turn on Bluetooth

Go into **Settings** on your iPhone, then turn on **Bluetooth** and pair your current mirroring computer.

Cancel

Pair

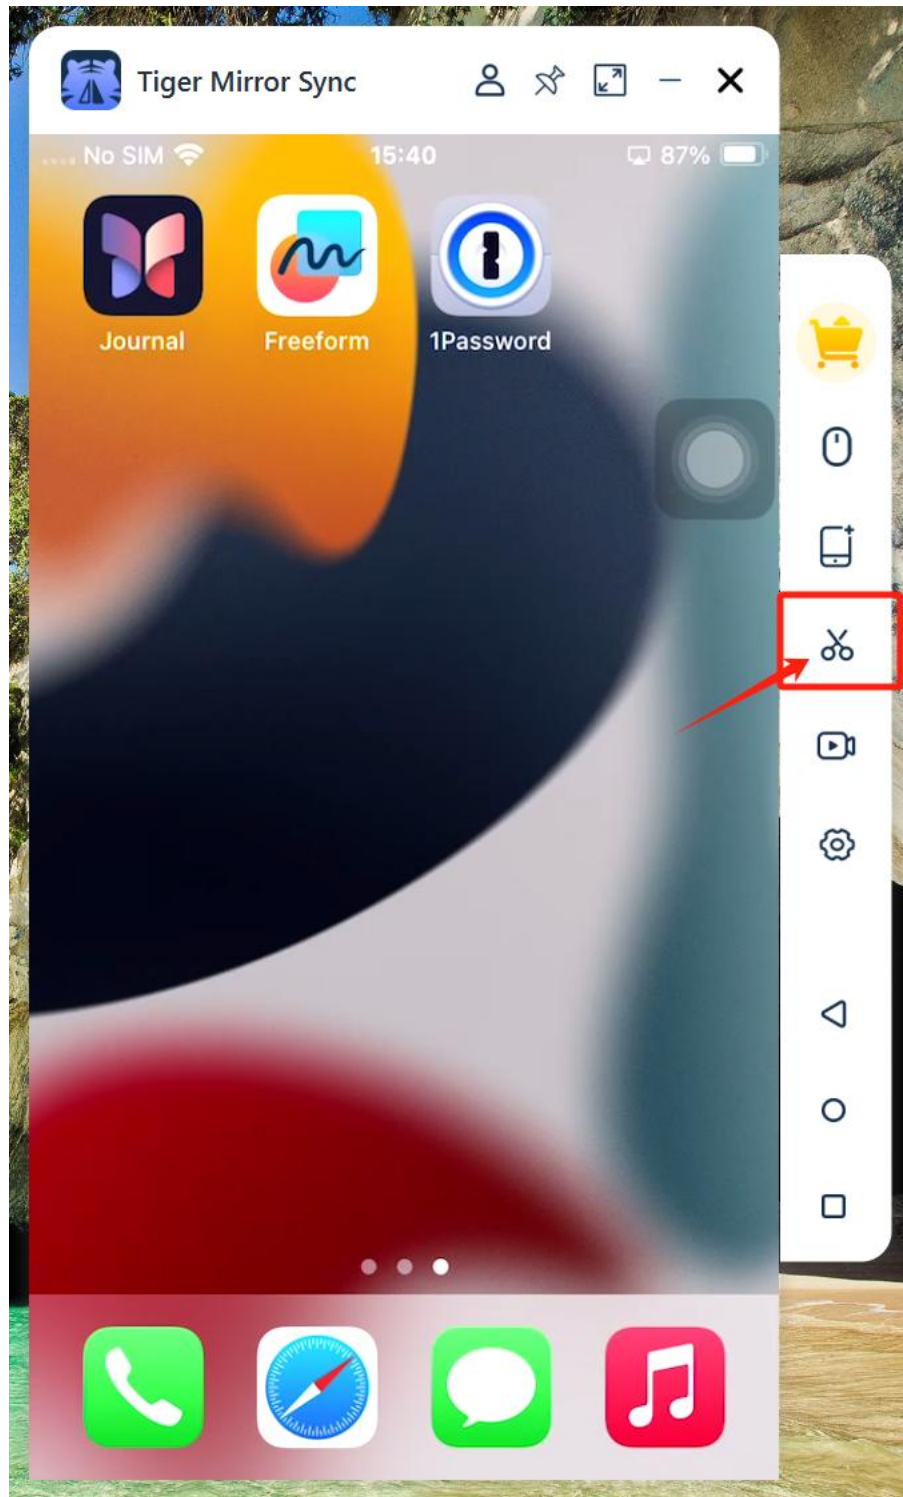

On your PC, click "Yes" when the window "Want to pair your device" pops up.

Then "Connection successful" will pop up. Now that the Bluetooth pairing is successful, you can control your iPhone from your PC using your mouse.

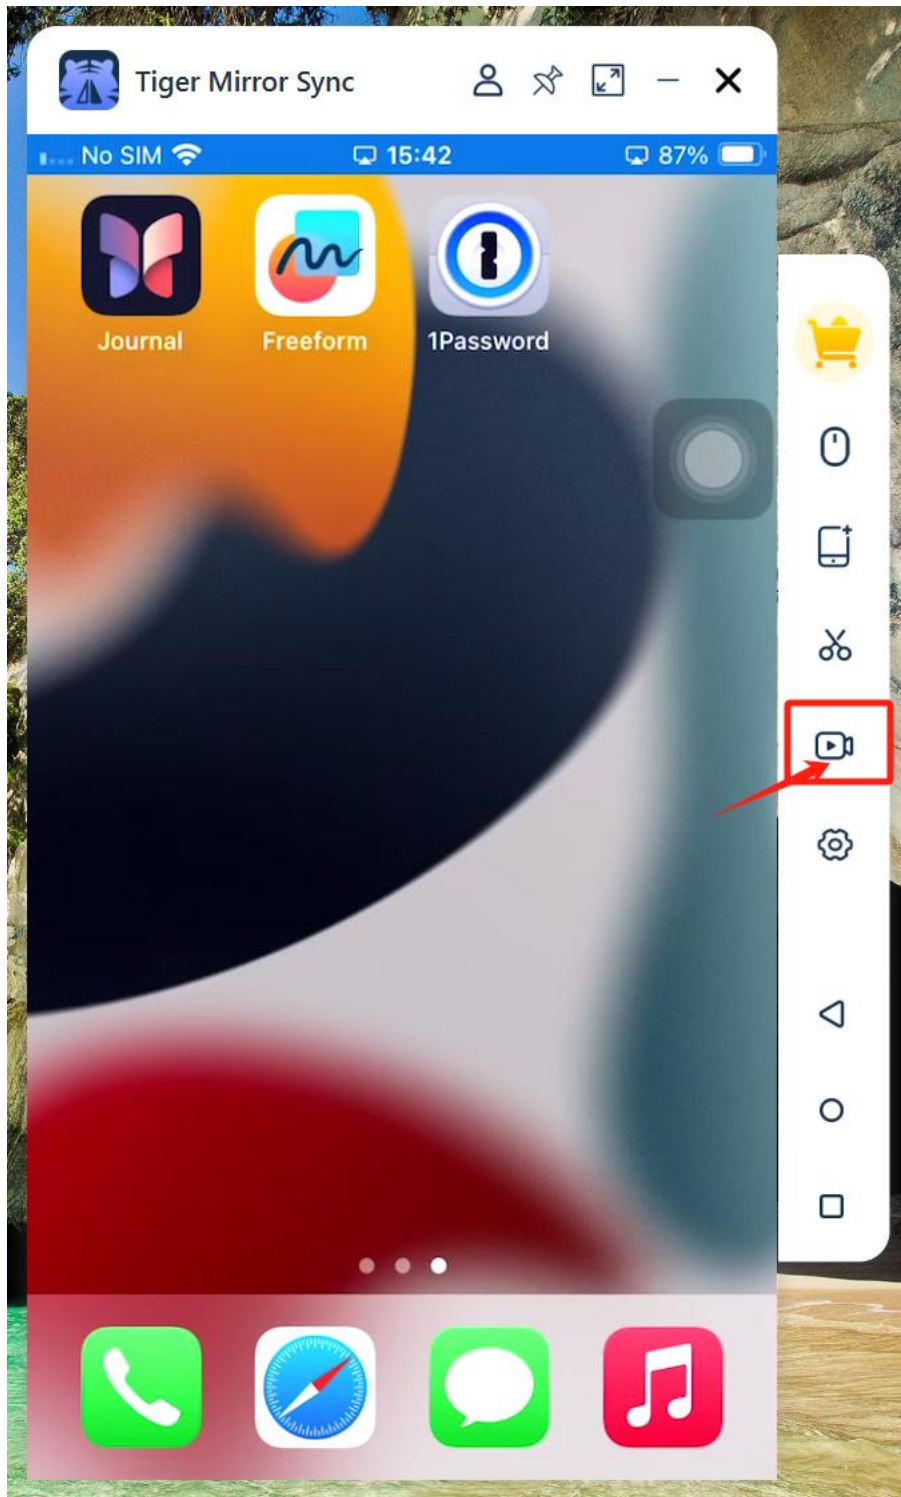

Part 4: How to take a screenshot or record your phone screen on computer

- 1. Click on the scissors icon to take a screenshot

After clicking, you can open the folder to view the screenshot.

- 2.Click the camera icon to start recording
